

Ultimate protection for sensitive biologics

Biotechnology innovations call for equally advanced packaging. Adelphi Healthcare Packaging offers reliable, compliant solutions which support the unique challenges of sensitive biologics from development to delivery.

Combined with our expert technical support, wide stock range and global logistics expertise, Adelphi provides all you need to maximise your success in biotech and life sciences.

Contamination control

Biologics are inherently vulnerable to contamination. Selecting the right primary packaging is essential to maintain sterility and protect product integrity throughout shelf life.

Minimised drug-packaging interaction

Biological drugs can interact with packaging materials creating leachable and extractable risks that may impact product safety. Carefully chosen materials are critical to reduce this risk.

Low temperature performance

Many biologics require strict temperature control. We provide primary packaging designed to maintain container closure integrity at freezing temperatures and withstand freeze-thaw cycles.

A product range that supports your success

EVERIC® range of vials

EVERIC® is a range of high-tech vials, each with its own special features, including:

- [EVERIC® pure's](#) superior inner surface, designed to resist leachables, pH shifts and delamination
- [EVERIC® Iyo's](#) hydrophobic internal coating and enhanced thermal transfer for improved lyophilisation
- [EVERIC® care's](#) Si-O-C-H inner layer for protecting sensitive, high pH biologics
- [EVERIC® plus'](#) inert silicon dioxide internal coating, creating an ion barrier for highly sensitive drugs

[Daikyo Crystal Zenith® polymer vials](#)

- Made from high-quality cyclic olefin polymer (COP)
- Metal-free design eliminates metal ion leaching
- Low extractables and leachables profile
- Proven CCI at ultra cold (-80°C) and cryogenic temperatures

[NovaPure® stoppers](#)

- FluroTec® barrier film for a superior E&L profile
- West's tightest particulate specification for stoppers
- Precise dimension control for unsurpassed CCI

Many items detailed above are available sterile and ready-to-use. Additionally, we stock compatible aluminium crimp seals and push-fit caps, also available ready-to-use for aseptic processes.
